Callisto 3D is software created and developed by the engineers at Occhio. Used in conjunction with any Occhio instrument, this software receives and deciphers the vast amounts of digital information which is supplied during microscopy analyses. Certified to conform with ISO 9276-6 Norms, this software uses powerful algorithms to interpret, characterize, and sort each particle independently. With over 60 evaluation tools, Callisto 3D allows the user to thoroughly review analysis results for thousands of different applications. Though inclusive, this software remains user friendly and intuitive with an easy to use navigation wheel and descriptions which appear when the cursor is hovered over a button.

## Annex 3: Parameter definitions

Names and definitions are compliant with ISO 9576-6

Weight Factors: 6

| Parameter | Other name | Sym- <br> bol | Definition | Formula |
| :--- | :---: | :---: | :--- | :--- |
| Number |  | V | The volume of the particle volume model. |  |
| Volume |  |  | The volume of the sphere having the same projec- <br> tion area of the particle. |  |
| Equivalent Volume |  | A | The projection area of the particle. |  |
| Projection area | S | The external surface area of the particle volume <br> model. |  |  |
| Surface area |  |  | The area of the smallest convex hull that contains <br> the projection of the particle |  |
| Area of the convex hull |  |  |  |  |

Size Parameters: 35

| Parameter | Other name | Sym- <br> bol | Definition | Formula |
| :--- | :---: | :---: | :--- | :--- |
| Perimeter |  | $P$ | $P_{c c}$ | The length of the particle perimeter. <br> The length of the particle perimeter computed by <br> Cauchy-Crofton formula. |
| Cauchy-Crofton perimeter |  | $P_{c}$ | The perimeter length of the convex hull (envelope) <br> that bounding the particle. |  |
| Perimeter of the convex hull |  |  |  |  |

| Volume-equivalent diameter |  | $x_{V}$ | The diameter of a sphere having the same volume as the particle volume model. | $\sqrt[3]{\frac{6 V}{\pi}}$ |
| :---: | :---: | :---: | :---: | :---: |
| Area-equivalent diameter | Equivalent circle diameter, ECD | $\chi_{A}$ | The diameter of a sphere having the same projection area as particle. | $\sqrt[2]{\frac{4 A}{\pi}}$ |
| Surface-equivalent diameter |  | $x_{s}$ | The diameter of a sphere having the same surface area as the particle. | $\sqrt[2]{\frac{S}{\pi}}$ |
| Perimeter-equivalent diameter |  | $\chi_{P}$ | The diameter of a circle having the same perimeter as the projection area of the particle. | $\frac{P}{\pi}$ |
| Cauchy-Crofton perimeterequivalent diameter |  | $X_{P c c}$ | The diameter of a circle having the same CauchyCrofton perimeter as the projection area of the particle. | $\frac{P_{c c}}{\pi}$ |
| Inner diameter | diameter Maximum inscribed circle diameter | $d_{\text {imax }}$ | The diameter of biggest circle inscribed into the projection area of the particle. |  |
| Legendre ellipse maximum |  | XLMax | The major axis of an ellipse with its center at the particle's centroid and with the same geometrical moments, up to the second order, as the projection area of the particle. |  |
| Legendre ellipse minimum |  | XLMin | The minor axis of an ellipse with its center at the particle's centroid and with the same geometrical moments, up to the second order, as the projection area of the particle. |  |
| Feret diameter maximum | Length of particle | $\chi_{\text {FMax }}$ | The maximum distance between parallel tangents to the projection area of the particle. |  |

| Feret diameter minimum | Breadth of particle | $\chi_{\text {FMin }}$ | The minimum distance between parallel tangents to the projection area of the particle. |  |
| :---: | :---: | :---: | :---: | :---: |
| Feret conjugate | Feret length | XLF | The Feret diameter (i.e. the distance between parallel tangents to the projection area of the particle) perpendicular to Feret diameter minimum. |  |
| Angle-average Feret diameter |  | $\bar{x}_{F}$ | The mean Feret diameter. |  |
| Geodesic length |  | $X_{L G}$ | A better approximation of the particle length and | $A=x_{E} \cdot x_{L G}$ |
| Thickness |  | $\chi_{E}$ | width for very long and concave particle (fibers) | $P=2\left(x_{E}+x_{L G}\right)$ |
| Minimum circumscribed circle diameter |  | $d_{\text {cmin }}$ | The smallest circle containing the projection area of the particle. |  |
| Erosion number |  | $\omega_{1}$ | The number of erosions necessary to make the projection area of the particle disappears completely. |  |
| Convex hull erosion number |  | $\omega_{2}$ | The number of erosions necessary to make the area of the convex hull of the projection area of the particle disappears completely. |  |
| Fractal dimension |  | $D_{F}$ | The relationship between the length of the perimeter $[P(\lambda)]$ and the length of the step $[\lambda]$ is considered as linear on log-log plot. The fractal dimension provides the slope of this linear relationship. | $\begin{aligned} & \log P(\lambda) \\ & =\left(1-D_{F}\right) \log \lambda \\ & +\log b \end{aligned}$ |
| Mean diameter |  |  | The double of the mean distance between gravity center of the projection of the particle and each point of the outline of the projection of the particle. |  |
| Inertia box width |  |  | The width of the smallest box that contains the projection of particle with the same principal directions that the projection of the particle. |  |

| Inertia box height | The height of the smallest box that contains the projection of particle with the same principal directions that the projection of the particle. |  |
| :---: | :---: | :---: |
| Skeleton length | The length of the convex hull outline minus the biggest convex hull segment. |  |
| Specific Area | The ratio between the external surface of the particle volume model and the volume of this model |  |
| Inner threshold area | The area of the inner part of the projection area that are segmented by inner threshold parameters |  |
| Inertia-box depth | Only for 3D instrument: Side Inertia box width |  |
| Inner diameter depth | Only for 3D instrument: Side inner diameter |  |
| Side Feret minimum | Only for 3D instrument: Side Feret minimum |  |
| Brownian diameter | Only for Brownian motion instrument |  |
| Wire Y | Only for SieveCal instrument: The size of the opening wire as defined in ASTME11-13 |  |
| Wire X | Only for SieveCal instrument: The size of the opening wire as defined in ASTME11-13 |  |
| Opening Y | Only for SieveCal instrument: The size of the opening as defined in ASTME11-13 |  |
| Opening X | Only for SieveCal instrument: The size of the opening as defined in ASTME11-13 |  |

Shape Parameters: 52

| Parameter | Other name | Sym- <br> bol | Definition | Formula |
| :--- | :--- | :--- | :--- | :--- |

| Ellipse ratio | Elliptical shape factor |  | The ratio of Legendre ellipse minimum to Legendre ellipse maximum. | $\frac{x_{\text {Lmin }}}{x_{\text {Lmax }}}$ |
| :---: | :---: | :---: | :---: | :---: |
| Aspect ratio |  |  | The ratio of Feret minimum to Feret maximum. |  |
|  |  |  |  | $\chi_{\text {Fmax }}$ |
| Elongation | Eccentricity |  | The ratio of thickness to geodesic length. | $\frac{x_{E}}{x_{L G}}$ |
| Straightness |  |  | The ratio of Feret maximum to geodesic length. | $\underline{x_{\text {Fmax }}}$ |
|  |  |  |  | $x_{L G}$ |
| Curl |  |  | The ratio of geodesic length to Feret maximum. | $x_{L G}$ |
|  |  |  |  | $x_{\text {Fmax }}$ |
| Irregularity | Modification ratio |  | The ratio of maximum inscribed circle diameter to minimum circumscribed circle diameter. | $\frac{d_{\text {imax }}}{d_{\text {cmin }}}$ |
| Compactness |  |  | The degree to which the projection area of the particle is similar to a circle. The ration of the area-equivalent diameter to Feret diameter maximum. | $\frac{x_{A}}{x_{F \max }}$ |
| Roundness |  | $R_{n}$ | Similar to compactness but less robust (see ISO92766) | $\frac{x_{A}^{2}}{x_{F \max }^{2}}$ |
| Extent | Bulkiness |  | The ratio of projection area to the product of Feret diameter maximum by Feret diameter minimum. | $\frac{A}{x_{\text {Fmax }} x_{\text {Fmin }}}$ |
| Box ratio |  |  | The ratio of projection area to the Feret box area. Where the Feret box area is the product of Feret diameter minimum by Feret diameter conjugate. | $\frac{A}{x_{F m i n} x_{L F}}$ |
| Wadell's sphericity |  | $\psi$ |  | $\left(\frac{x_{V}}{x_{S}}\right)^{2}$ |
| Wadell's roundness |  | Rw |  | $\frac{\sum d_{i}}{n \cdot d_{i \max }}$ |
| Form factor | FF |  |  | $\frac{4 \pi A}{P^{2}}$ |

| Circularity | C | The degree to which the projection area of the particle is similar to a circle, considering the smoothness of the perimeter. | $\frac{x_{A}}{x_{P}}$ |
| :---: | :---: | :---: | :---: |
| Crofton Circularity |  | It's the circularity computed with Crofton correction |  |
| Solidity |  | A measure of the overall concavity of the projection area of the particle. | $\frac{A}{A_{C}}$ |
| Global surface concavity index | Cl | A measure of the overall concavity of the projection area of the particle. | $\frac{A_{C}-A}{A}$ |
| Concavity |  | A measure of the overall concavity of the projection area of the particle. | $\frac{A_{C}-A}{A_{C}}$ |
| Convexity |  |  | $\frac{P_{C}}{P}$ |
| Crofton Convexity |  | It's the convexity computed with Crofton correction |  |
| Average concavity | $\psi_{\text {FP }}$ |  | $\frac{\bar{x}_{F}}{x_{P}}$ |
| Particle robustness | $\Omega_{1}$ |  | $\frac{2 \omega_{1}}{\sqrt[2]{A}}$ |
| Largest concavity index | $\Omega_{2}$ |  | $\frac{2 \omega_{2}}{\sqrt[2]{A}}$ |
| Concavity/robustness ratio | $\Omega_{3}$ | The ratio of particle robustness to the Largest concavity index. | $\frac{\omega_{2}}{\omega_{1}}$ |
| Occhio bluntness |  |  |  |
| Occhio abrasivity |  |  |  |
| Occhio elongation |  | One minus the ratio Inertia box width to Inertia box height |  |
| Occhio roughness xx\% |  | The ratio of smooth reference to the particle projection area. The smooth reference is defined by |  |

|  |  |  | inscribed circles tangent to each point of the particle <br> projection outline with a radius greater than XX\% of <br> the maximum inscribed circle. <br> Mean value of the luminance of pixel inside the pro- <br> jection area of the particle |  |
| :--- | :--- | :--- | :--- | :--- |
| Mean luminance |  | Mean value of the luminance of pixel inside the pro- <br> jection area of the particle |  |  |
| RSD luminance |  | Only for color instrument: Mean value of the red <br> channel of pixel inside the projection area of the <br> particle |  |  |
| Mean red |  | Only for color instrument: RSD value of the red <br> channel of pixel inside the projection area of the <br> particle | Only for color instrument: Mean value of the green <br> channel of pixel inside the projection area of the <br> particle |  |
| RSD red |  | Only for color instrument: RSD value of the green <br> channel of pixel inside the projection area of the <br> particle |  |  |
| Mean green |  | Only for color instrument: Mean value of the blue <br> channel of pixel inside the projection area of the <br> particle |  |  |
| RSD green |  |  | Only for color instrument: RSD value of the blue <br> channel of pixel inside the projection area of the <br> particle |  |
| Mean blue |  |  |  |  |
| RSD blue |  |  |  |  |

| Mean inner red |  | Only for color capable instruments: Mean value of <br> the red channel of pixel inside the projection area of <br> the particle that are segmented by inner threshold <br> parameters |  |  |
| :--- | :--- | :--- | :--- | :--- |
| Mean inner green |  | Only for color instrument: Mean value of the green <br> channel of pixel inside the projection area of the <br> particle that are segmented by inner threshold pa- <br> rameters |  |  |
| Mean inner blue |  | Only for color instrument: Mean value of the blue <br> channel of pixel inside the projection area of the <br> particle that are segmented by inner threshold pa- <br> rameters |  |  |
| Side aspect ratio |  | Only for 3D Instrument: the aspect ratio measured <br> with the side camera. |  |  |
| Side Occhio elongation |  | Only for 3D Instrument: the Occhio elongation <br> measured with the side camera. | Only for 3D Instrument: the aspect ratio measured <br> with the side camera. |  |
| Side solidity |  | Only for 3D Instrument: Ratio of the Inertia-box <br> depth to Inertia-box width |  |  |
| Occhio flattening |  |  |  |  |
