

Liquid Sampling PeriPump Set. Up to 8m Deep

Liquid sampling is fast and simple with our PeriPump Set. The set can be used to sample from almost everywhere including kegs, drums, vessels, wells, rivers and the sea. The handy set comes with everything you need to get sampling.

The battery operated peristaltic pump can take samples of water up to 8m deep. This makes it ideal for sampling large depths or taking samples of a gantry or platform. The high powered drive gives the best in class power and long lasting battery life.

EASY TO USE

Attach the hose into the drive unit and press the power button on the drive unit to take a fast liquid sample. For total contamination free sampling change the hose after use. Because of the way the pump operates only the tube becomes contaminated. Either wash the tube or use fresh tube each time.

The set includes 10m tube, drive unit, X2 spare long life batteries, hose weight and a sturdy case for storage. Spare silicone tube is available from stock. Both non sterile and sterile silicone tube are available.

Flow rate with water at 2m is approx. 3 liters per minute.

QUALITY - High quality power unit with long lasting lithium batteries. Everything is supplied in a high quality case

FLEXIBILITY- The drive unit comes with a multi pin adapter so the drive unit can be used in over 150 countries including European, US, UK, Australian and China

MAX SAMPLING DEPTH - Can take samples up to 8m deep eg Water up to 8m. Vegetable oil up to 5m. Shampoo up to 3m
